

ANALYZE

Insights to make better decisions

Synergy ANALYZE is an analytics tool application that helps organizations understand collaboration trends and patterns, and provides the analysis needed to make fact-based decisions on collaboration investments, divestments, training, and service changes.

KEY INSIGHTS

- ✓ ROI
- ✓ Packet loss / Jitter
- ✓ Travel cost savings
- ✓ Usage history and trends
- ✓ Productivity Increase

HIGHLIGHTS

- ✓ Multi-dimensional collaboration analytics
- ✓ Heat Maps
- ✓ All data stays on customer premises
- ✓ Easy deployment

SUPPORTED TECHNOLOGIES

- ✓ Cisco CMS,
- ✓ Pexip Infinity

FEATURES

Dashboard

Monitor both ad-hoc and scheduled on Pexip Infinity and Cisco CMS multi-conference units

Customizable Data Tagging

Fully customizable URI tagging system with Department, Location, Country and Custom Tags

Self-Hosted

Unique self-hosted deployment model. Implement as an on-premises solution or in a private cloud, the choice is yours.

Quick Installation

Virtualized environment friendly for easy installation (OVA). Single click upgrade and maintain functionality.

Time-zone Aware

Adapts easily to global deployments with multiple time-zones

Customizable Reports

Reports can be customized to meet the needs of your organization.

Standard Reports Include*:

- Call Distribution
- Country
- Device Usage
- Compare Report
- Endpoint Details
- Endpoint Utilization
- Protocol Distribution
- Travel/ROI Analytics
- by Property
- Call Usage by
- Endpoint
- Endpoint List
- Meeting Room
- Total Usage
- Usage Grouped

NEW Synergy Of Things

Synergy of Things optimizes resource utilization by better understanding scheduling behavior, booking patterns and meeting attendance.

Using Synergy JOIN, CONTROL and ANALYZE together, organizations can now harness the power of their calendaring system to optimize their meeting room facilities using endpoints and in-room sensors.

No-show detection

Informs the meeting organizer when a booked room is not being used. Administrators can implement rule-based logic to de-book unused rooms. Virtual meeting remain untouched.

Booking and utilization reports

Synergy of Things leverages endpoint and sensor information to deliver analytics on usage and resource utilization. Collecting data from booked versus actual usage, the Synergy of Things platform gives insight into virtual meeting technology trends, space utilization and visibility to possible meeting-based asset management improvements.

No-show pre-warning

The Synergy of Things technology can be used to send pre-warnings to administrators and/or a meeting organizer if there is no one in the room at meeting start time.
